

Why did Lockdown start?

Why did lockdown start?

A long time ago there was a virus formed, its name is Coronavirus. Well that's how lockdown started. So now its infected lots of people, we will be doing more on every Monday.

This is what Coronavirus looks like

We have done lots of things like make an ant nest, lots of walks, we had one walk with next door and soon lockdown will end. I am looking forward to going to people's houses again so now we are getting to the end. Meanwhile we will do some stuff I might have an early bedtime or a late bedtime. Soon there will be a vaccine for the virus and then there will be a cure and then Coronavirus will not be there anymore. We will celebrate New Year's Eve and by 2021 we will be able to go to people's house and hang out. We won't have to use hand gel so often and we can go back to school. Now we are going to the end of the story. Next year we are going out of the garden to find as many Easter eggs and go out with lots of people not just 6. But not strangers.

The end.
