

### **My Dream: The big future for Callum**

My future starts with my big education and I graduate from high school. There was a big party in the hall where I went to see my family when I was younger. My family, my teachers and my friends were very proud of me, we celebrated really good and it was an excellent party and the speech was great. After, I said goodbye to my parents, my dog and my family to go to university. I studied technology and how to be successful and after two years I saw my family again. Then I started to do phone calls and lots of paper work and after that happened, I made the people of the construction site make a company of technology! I did the sales and they were off the chart, I was so successful that I managed to make my first dream project, a machine that can give you eternal life! I paid lots of money to hire the best scientists in the world. They worked hard and they finally got the formula to make the machine work. People paid thousands of pounds to live an eternal life. Finally, the scientists made my second dream project, a dimension of Dragon ball, an anime I watched when I was a kid. The machine was completed and when it was, I chose my race. I choose the Saiyan race, then I said goodbye and I said I will be back some day. Then, I went into the portal and I was gone! That is my dream.
